

# ALLROUND FLAT ROOF GUARDRAIL PROTECTION

Layher® 

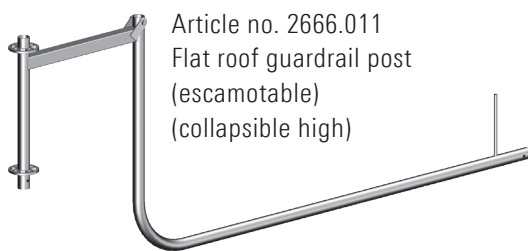

Meer mogelijk. Het systeem voor steigers.

Roof edge protection suitable for flat roofs. The collapsible guardrail posts, guardrail post clamps and synthetic ballast blocks are based on Allround components. With only a few components in addition to the Allround ledgers already in use, variable fall protection systems can be assembled quickly and easily. The maximum length of the ledger ( guardrail) between two guardrail posts is 3.07 m. Ballast blocks prevent tipping over of the flat roof guardrailposts.
